

Figure 49: Top plan for X23 (by Mark Hassler).

X23 Loci Details

1. **Earth Locus** – This locus marked the sloping topsoil.
2. **Earth Locus** – This locus constituted a debris layer in the SE corner of the square. Boulders fallen from the walls punctuated the locus. Numerous air pockets existed. The depth was 83 cm. This layer lay under L.1, over L.6, and contiguous to L.3. It sealed against L.5 (= Wall 202) and equaled L.8.
3. **Earth Locus** – This locus represented the same debris layer as L.2, but on the other side of L.5 (= Wall 202). It filled the chamber in the SW sector of the square. It sat atop L.7.
4. **Architectural Locus** – This locus signaled a wall (Wall 201). One row of megaliths (80 cm) endured to a height of 1.93 m (869.10–871.03 m). Two to four courses remained intact. The wall rested on bedrock, angled at 120°. It paralleled Wall 204 (= L.3 of X22), and joined two perpendicular walls: Walls 203 (= L.2 of X22) and 202 (= L.5 of X23). The wall possessed an entrance into the chamber in the SW part of the square. A tabun (= L.12) sat flush against the threshold—a peculiar location, perhaps indicating another phase of occupation. Next to the tabun rested an *in situ* lower (?) socket stone (cf. L.14). Just above the socket stone, an

arrowhead (Object 2425) was lodged into the wall, presumably from an arrow shot through the tower's exterior entrance.

5. **Architectural Locus** – This locus designated a wall (Wall 202). The wall traversed the square at 30°. Much like L.4 (= Wall 201), it arose from bedrock, stood two to four courses, used one row of megaliths (60–80 cm), and featured an entrance. The greatest height spans 2.12 m (868.81–870.93 m). Near the entrance, along the SE face of the wall, sat two *in situ* storage jars (cf. L.13), one of which was completely restored.
6. **Earth Locus** – This locus reflected a change in soil hardness. It appeared in the SE portion of the square. Whereas the locus above it (L.2) had a loose consistency, this layer employed hard packed soil. As with L.2, boulders fallen from the walls pervaded this locus. The soil was brown (7.5 YR, 5/4). This locus equaled L.10. The loci were initially thought to be separated by a wall. It lay contiguous to L.7, divided by Wall 202 (= L.5).
7. **Earth Locus** – This locus represented a change in soil hardness. It occupied the SW portion of the square. Essentially, it resembled L.6, but appeared on the other side of Wall 202 (= L.5). The matrix filled the SW chamber of the square. Boulders from the walls fell randomly throughout the locus. Small pockets of darker soil emerged, but not enough to initiate a new locus. This locus aligned under L.3 and over bedrock. It yielded a pinched Hellenistic oil lamp (Object 2472).
8. **Earth Locus** – This locus yielded loose debris. It primarily occupied the NW area of the square. It lay under L.1 and over L.10. It equaled L.2 and sealed against L.5 (= Wall 202). Multiple boulders fallen from the walls typified the locus.
9. **Earth Locus** – This locus isolated a rock layer below the topsoil of L.1. It occupied the north room of the square, the room just inside the tower entrance. Scattered boulders from the walls characterized the locus. One such boulder was an upper gate (?) socket stone (Object 2474), possibly from one of the two interior gates within the square. This socket matched the lower gate socket stone (cf. L.14) in diameter (23–25 cm) and depth (23–24 cm).
10. **Earth Locus** – This locus signaled an earth layer below the debris of L.8. It predominately covered the NE sector of the square. It equaled L.6. (Initially a wall was thought to divide L.6 and L.10; hence, a different locus was assigned). The soil was dry, somewhat hard, and brown (7.5 YR, 5/4). Near the entrance in Wall 202 (= L.5) was an architectural notch (Object 2475), carved into limestone. The notch undoubtedly housed a small wood beam, and probably contributed to the construction of the doorway.
11. **Earth Locus** – This locus signaled a change in soil color, from the brown of L.10 (7.5 YR, 5/4) to dark brown (7.5 YR, 3/4). The locus included everything SE of Wall 202 (= L.5). The soil was relatively hard and very dry.

12. Installation Locus – This locus designated a tabun. The tabun consisted of small stones, lined with crumbly and unfired red clay. It had a beehive shape, and was small in size (42 x 51 x 48 cm). The top and bottom elevations were 869.28 and 868.80 m. It was orientated at 30°. Interestingly, it was bonded to the NE face of Wall 201 (= L.4), below the threshold of an entrance.

13. Earth Locus – The assigning of this locus was arbitrary, as bedrock approached. The locus included the area SE of Wall 202 (= L.5), but north of the wall's entrance. It featured two *in situ* storage jars (Objects 2476 and 2477). The jars were setting against the SE face of Wall 202. Jar "a" measured 0.52 m in height, 0.93 m in girth, and 0.11 m in rim diameter. Jar "b," lacking a restorable rim, was restored to a height of 0.38 m, and possessed a girth of 0.89 m. This jar included a potsherd with a painted black stripe (Object 2246). The potsherd, however, came from the upper part of the vessel, and thus could not be glued to the restored portion. Both jars contained sherds from other vessels and a few seeds. Nearby were tabun fragments. This locus lay below L.11 and above bedrock.

Figure 50: Two storage jars (photos by Mark Hassler).

14. Earth Locus – This locus represented an earth layer close to bedrock. It covered the north chamber of the square. The soil was very firm, mostly dry, and brown (7.5 YR, 5/4). From this locus came an *in situ* lower gate (?) socket stone (Object 2473). The stone measured 50 x 50 x UD cm. The stone stayed in the field, *in situ*, and the height of the stone remains undetermined. The socket spanned 25 cm in diameter and 24 cm in depth. The top elevation was 869.02 m. This locus aligned under L.9 and over L.16.

15. Earth Locus – This locus designated an earth layer near bedrock. It occupied the SE portion of the square. Hard pack soil typified the locus. It was under L.11, over bedrock, and contiguous to L.13.

16. Earth Locus – This locus consisted of a change in soil color above the uneven bedrock. It covered the center portion of the north chamber. The color was dark brown (7.5 YR, 3/4). The locus bottoms out at 868.45 m.

17. Installation Locus – This locus designated bedrock.

Square CAV 4 (under squares S22-23), 25-28 May (Abigail Leavitt, Square Supervisor and Destry Jackson, Assistant Square Supervisor)

Figure 51: Square CAV 4 Final Photo (photo by Michael C. Luddeni).

Overview

CAV 4, located beneath squares S22 and S23, was a plastered installation featuring stairs (entrance 1) leading down to a landing, which then turn, passing under a bridge in the bedrock to an area open to the surface (entrance 2). Beyond this area, it opens up into a large, rounded area with a circular opening (entrance 3) to the surface. The function of this installation is unknown, but it is likely a mikveh. The pottery was primarily LH/ER. 20 coins were found, as well as 1 piece of stoneware, and an inscribed jar stand. CAV 4 was partially excavated in May 2014, and excavations were completed in May 2015.

CAV 4 Loci Details

- 1. Earth Locus** – L.1 was the debris fill within the installation excavated in May 2014. It consisted of dark reddish brown earth (Munsell reading 7.5 YR 3/2), and many small, medium, and large stones. Top elevation was 873.90, and bottom elevation was 872.12, with a depth of 1.87 m. Pottery and coins were abundant.
- 2. Installation Locus** – L.2 was the installation. It consisted of an entrance (entrance 1), which is 2.75 m long and 1.2 m wide, containing a flight of 4 stairs leading downward from NW to SE, with elevations of 873.78, 873.35, 872.98, and 872.55, a landing, elevation 872.25, another step, leading SW, with an elevation of 872.1, and 4 more steps, curving to the right, and continuing until the western end of the installation is reached. The lower 4 steps have elevations of 871.75, 871.59, 871.41, and 871.06. A bedrock bridge passes over the SW step, with a top elevation of 873.90. It appears that stone-built pillars supported the bridge, but all that remain are three stacked stones on the eastern end of the bridge. At the SE end of the SE flight of stairs is a niche carved into bedrock 60 cm deep and 70 cm wide, with a bottom elevation of 872.63. Entrance 2 is 1.3 m long and 60 cm wide, and the surface bedrock at the NW end of the opening bears evidence of quarrying. In the northern corner of the opening is a niche carved into the bedrock,

with a top elevation of 874.08, and a bottom elevation of 873.94. Its function is unknown. Entrance 3 is a circular opening with a diameter of 50 cm, and a small niche on the western side of the hole, probably functional for prying a capstone off the opening. The interior of the entire installation showed evidence of having been plastered all the way to the ceiling, and in some locations a second layer of plaster existed. One coin was found in the plaster of CAV 4.

3. **Earth Locus** – L.3 was the fill dirt inside CAV4 excavated in May 2015. The soil was dark reddish brown, with a Munsell reading of 7.5 YR 3/2. There was no distinguishable stratification within CAV 4, and the earth was mixed with tumbled stones ranging from pebbles to large boulders. There seemed to be a concentration of large boulders in the western end of the installation. Top elevation was 872.12, and bottom elevation was 871.06; for a depth of 1.06 m. Pottery, coins, and an inscribed jar stand were found in this locus.
